ULTIMATE

WELLNESS GUIDE

TO MENSTRUAL CYCLE-SYNCING, FERTILITY, AND MENOPAUSE

What Every Generation Needs to Know About The Life Stages of Their Menstrual Cycle

RHYTHMRENEW.COM

Hey, Babe!

WELCOME TO

Rhythm Renew

This e-book is your guide to understanding the rhythm of your body through every stage; from your first period, to fertility and conception, to the transition of menopause. Inside, you'll learn how to support your hormones and energy through a practice called cycle syncing, tuning in to the natural rhythms your body goes through each month and aligning your nutrition, movement, and mindset to match.

Whether you're getting your first period, planning for pregnancy, or navigating life after it, this handbook will help you feel grounded, confident, and connected to your body's rhythm.

Get ready to learn, grow, and unlock your own rhythm!

WHERE TO TUNE IN:

MENSTRUAL CYCLE SYNCING: PAGES 3-30

FERTILITY: PAGES 31-35

MENOPAUSE: PAGES 36-41

GLOSSARY

- **Menstrual Cycle**
  Your body's monthly routine, usually about 28 days, that includes your period and hormone changes.

- **Period (Menstruation)**
  When blood and tissue leave your uterus through your vagina. This happens once a month if there's no pregnancy.

- **Uterus**
  The organ in your lower belly where a baby could grow one day. It sheds its lining during your period.

- **Ovaries**
  Two small organs that store eggs and make important hormones like estrogen and progesterone.

- **Egg (Ovum)**
  A tiny cell from the ovary. If it meets sperm, it can start a pregnancy.

- **Ovulation**
  The time in your cycle when an ovary releases an egg.

- **Estrogen**
  A hormone that helps build up the uterus lining and boosts energy, mood, and creativity.

- **Progesterone**
  A hormone that rises after ovulation and prepares your body for a possible pregnancy.

- **Luteinizing Hormone (LH)**
  A hormone that triggers ovulation—telling the ovary to release an egg.

- **PMS (Premenstrual Syndrome)**
  The mix of symptoms (like cramps, bloating, mood swings) some people feel before their period.

WHAT IS A PERIOD?

Your period is a completely normal and healthy part of growing up. It's when your body releases blood and tissue from your uterus (the place in your body where a baby could grow one day if you wanted children.) This happens through your vagina, usually once a month. This is all part of a bigger process called the menstrual cycle.

WHY DO WE GET THEM?

Every month, your body prepares for the chance of pregnancy by building up a soft lining inside your uterus. If there's no pregnancy, your body doesn't need that lining—so it sheds it. That's what you see as your period.

WHY IT MATTERS?

✨ Having a period means your body is healthy and working the way it's meant to.

✨ It's one of the biggest signs that you're growing up and moving through puberty.

✨ Your cycle is like your body's built-in calendar—it can tell you a lot about your health.

Rhythm Renew

THE MENSTRUAL CYCLE

Think of the menstrual cycle as your body's monthly routine. It's controlled by hormones—chemical messengers in your body that tell different organs what to do.

The cycle has a few important steps:

1. **Hormones rise** (like estrogen and progesterone), signaling your body to prepare an egg in your ovaries.
2. The **uterus lining** builds up a soft, cushiony layer, just in case a pregnancy happens.
3. Ovulation: about halfway through the cycle, the **ovary releases an egg.**
4. **If the egg isn't fertilized,** hormone levels drop. The uterus no longer needs the lining, so it sheds it. That shedding is your period.

WHAT IS CYCLE SYNCING?

Cycle syncing is about matching your everyday life—like how you move, eat, and spend your energy—with the different parts of your period cycle.

It's kind of like unlocking your body's "superpowers" each month and learning the best times to rest, be active, or shine the brightest!

KEY BENEFITS:

- More Energy
- Improved Focus
- Enhanced Self-Awareness
- Reduced PMS
- Better Mood
- Know Your Body Better
- Feel More in Control
- Less Stress About Periods
- Confidence Boost
- Smarter Self-Care

Rhythm Renew

TRACKING YOUR CYCLE

The first step to cycle syncing is knowing your cycle! Use the Rhythm Renew app to track your cycle—start logging on the first day of your next period for the most accurate tracking.

Rhythm Renew Tip: The Rhythm Renew app is *coming soon!* Get on the waiting list **here**.

In the meantime, make a copy in Canva of our calendar worksheet **here.** You can use it as a template for each month.

Days 1-7

PHASE 1: Menstrual

This is the time when **your body sheds the lining of the uterus,** which causes bleeding.

During this phase, **the hormones estrogen and progesterone are at their lowest.** Because of that, your body doesn't have the same "fuel" it usually does, so it's normal to feel more tired and in need of slowing down.

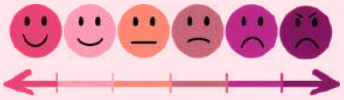

Your body is pressing the reset button, and it's a **time for rest and reflection.**

Hormones:
Estrogen and progesterone are at their lowest

Energy Levels:
Low

Mood:
Can be introspective or emotional

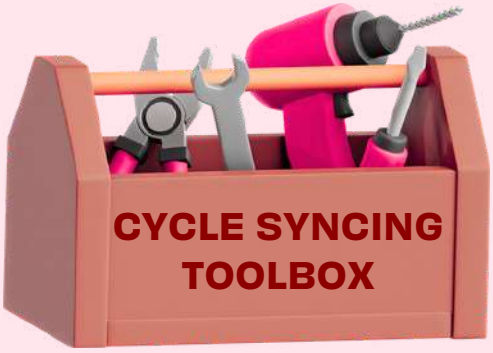

Food Cravings:
Comfort foods

Gentle exercise like yoga or walking.

Focus on self-care.

Eat iron-rich foods

Listen to 174 Hz, 285 Hz, 528 Hz healing sound frequencies

PHASE 1: MENSTRUAL

Follow us on Spotify for curated playlists!
@RHYTHMRENEW

MIND

Your period is a time to slow down and care for yourself. Try listening to these sound frequencies:

- **174 Hz** → eases pain and helps your body relax
- **285 Hz** → supports gentle healing
- **528 Hz** → brings calm and self-love

Make space for rest, calm, and kindness by letting go of what feels heavy. Try the "I Am Making Space" meditation when you need a reset. *(Continued on next page.)*

NUTRITION

Eat iron-rich foods like:

- Beans
- Spinach
- Dark leafy greens
- Comfort foods (mashed potatoes or chicken soup) with spices like turmeric or ginger

These support your body as you lose blood and can also ease cramps.

MOVEMENT

Rest is super important — moving lightly can ease cramps and help you feel less tired.

- Do gentle stretches like arm and shoulder circles, cat-cow pose, butterfly stretch, seated toe touch, and child's pose
- Book a yoga class
- Go on slow nature walks

MENSTRUAL MEDITATION

I AM MAKING SPACE

Your period is a time to slow down and give yourself extra care. This meditation helps you make space for rest and kindness by letting go of what feels heavy.

Repeat it anytime you need a reset. You can even write down your favorite line and keep it where you'll see it.

Before you start, take three deep breaths in through your nose and out through your mouth.

"When I feel afraid,
I make space for bravery.

When I doubt myself,
I make space for believing in me.

When I feel rushed,
I make space to slow down.

When I feel stressed,
I make space for rest.

When my thoughts get loud,
I make space to let them go.

When things feel messy,
I make space for calm.

When I feel unsure,
I make space for clarity.

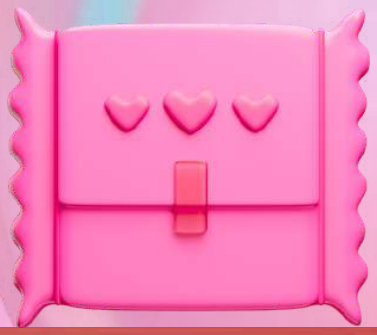

When I feel pain,
I make space for kindness toward myself."

Pads are soft, absorbent strips that stick to the inside of your underwear to catch period blood. They come in different sizes (thin for light days, thicker for heavy days) and are easy to use.

PADS

Panty liners are like super-thin pads. They're good for very light flow, the very start or end of your period, or even for everyday freshness if you have discharge.

PANTY LINERS

Tampons are small, cotton cylinders that go inside the vagina to absorb blood. They come with or without applicators to help put them in. You can't feel them once they're in the right spot, and they're good if you want to swim or do sports.

TAMPONS

A **menstrual cup** is a small, flexible silicone cup that goes inside the vagina and collects blood instead of absorbing it. You empty and wash it before putting it back in. It can last for years and is eco-friendly.

MENSTRUAL CUP

These look just like regular **underwear** but have special absorbent layers built in to catch period blood. They can be worn alone or as backup with another product. Super comfy and reusable!

PERIOD UNDERWEAR

Rhythm Renew

LET'S GO SHOPPING

Rhythm Renew

PADS

PANTY LINERS

1. Wash Your Hands and Get the Pad Ready:
   - Wash your hands with soap and water. Take the pad or panty liner out of its wrapper and remove the paper strip that covers the sticky backing.

2. Position the Pad on Your Underwear:
   - Pull your underwear down so you can clearly see the gusset (the center crotch area). Place the pad sticky-side down onto the gusset, positioning it in the center where it will align with your vulva.

3. Secure the Pad:
   - Press the pad firmly onto the fabric of your underwear to ensure the adhesive sticks well. If the pad has "wings" (extra flaps on the sides), remove the paper from the wings, wrap them around the underside of the gusset, and press them firmly to stick them to the outside of your underwear.

4. Check for Comfort and Go:
   - Pull your underwear up and adjust as needed to make sure the pad is comfortable and well-positioned. You should barely feel it. Dispose of any wrappers in the trash.

HOW TO APPLY

TAMPONS

1. Prepare and Position

- Wash your hands thoroughly with soap and water.
- Unwrap the tampon and pull the inner tube out until it stops (if it's a compact size). Make sure the string is hanging out of the bottom.
- Get comfortable: Sit on the toilet with your knees apart or stand with one foot propped up on a steady surface (like the toilet seat).

2. Insert the Applicator

- Hold the applicator by the grip (the ridges or narrower part in the middle) with your thumb and middle finger.
- Gently place the rounded tip of the applicator at the vaginal opening.
- Angle it slightly toward your lower back, following the natural curve of the vaginal canal, and gently push the outer tube of the applicator into your vagina until your fingers on the grip touch your body.

3. Push the Plunger

- Use your index finger (or your other hand) to push the inner tube (the plunger) completely into the outer tube. This action pushes the tampon out of the applicator and into the correct position inside your body.

4. Remove the Applicator and Check for Comfort

- While holding the grip, gently slide the entire applicator tube out of your vagina. The tampon should now be in place, with only the string hanging outside your body.
- You should not be able to feel the tampon. If you feel discomfort, it means the tampon is not far enough inside; pull it out gently using the string and try again with a fresh one, ensuring you push the applicator farther in.
- Dispose of the used applicator and wrapper in the trash (do not flush the applicator).

Rhythm Renew

HOW TO APPLY

MENSTRUAL CUP

1 Clean and Fold the Cup:
- Wash your hands, then wet the cup with water. Fold the cup using a method like the Punch-Down Fold to create a narrow tip.

2. Find a Comfortable Position:
- Relax your muscles. Sit on the toilet, squat, or stand with one foot propped up.

3. Insert and Release:
- Holding the folded tip, gently insert the cup rim-first into your vagina, angling it toward your tailbone. Once the entire folded part is inside, release your grip to allow the cup to open.

4. Check the Seal:
- Run a clean finger around the base of the cup to ensure it has fully opened (it should feel round/smooth). Gently pull the stem; if you feel resistance, a proper seal has been created.

PERIOD UNDERWEAR

1. Choose and Put Them On
- Choose the right absorbency: Select a pair that matches your flow for the day (e.g., heavy for your heaviest days, light for spotting or the end of your cycle).
- Simply wear them: Put the period underwear on just like you would any normal pair of underwear. They can be worn alone as a complete replacement for pads/tampons, or as a backup to a menstrual cup or tampon on heavy days.

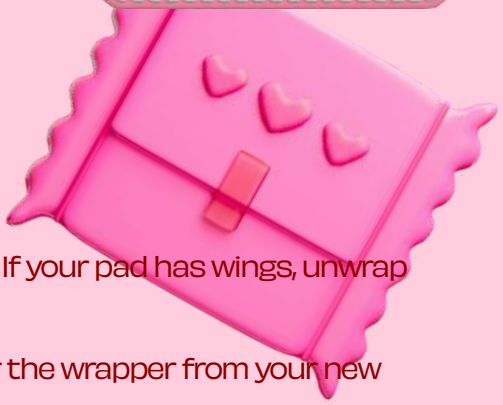

2. Wear and Know When to Change
- Wear for comfort: You can generally wear period underwear for 8 to 12 hours or as long as they feel comfortable and dry.
- Change when full: Change into a fresh pair when the underwear feels damp, heavy, or saturated, or if you notice any moisture creeping toward the edges of the absorbent area.

3. Rinse the Used Pair
- Remove and rinse immediately: Once you take them off, immediately rinse the used underwear under cold running water in a sink or shower.
- Rinse until clear: Keep rinsing and gently squeezing the absorbent area until the water runs mostly clear. This removes the majority of the blood and prevents staining.

4. Wash and Air Dry
- Wash on cold: Either hand-wash the underwear or toss them into the washing machine with your regular laundry on a cold or delicate cycle using a mild detergent.
- Air dry: Do not put them in the dryer. Hang them up or lay them flat to air dry completely. (Heat and fabric softener can damage the absorbent layers over time.)

Rhythm Renew

PANTY LINERS

PADS

1. Wash your hands.
   - Always start by washing your hands with soap and warm water.
2. Gently peel it off.
   - Slowly lift the pad from one end and peel it away from your underwear. If your pad has wings, unwrap those from around the sides first.
3. Wrap it up.
   - Fold the pad in half (sticky sides together) and wrap it in toilet paper or the wrapper from your new pad.
4. Throw it in the trash.
   - Put it in the garbage — not the toilet! Pads can clog pipes.
5. Put on a new pad.
   - Take a fresh one, remove the paper backing, and stick it onto your underwear. If it has wings, fold them around the sides.
6. Wash your hands again.
   - You're done — easy!

💡 **How often should you change your pad?**

- Change it every **4–6 hours** during the day.
- If your flow is heavier, you might want to change it more often.
- Always put on a new one before bed and when you wake up.

TAMPONS

HOW TO REMOVE

1. Wash your hands.
   - Start by washing your hands with soap and warm water. This keeps things clean and healthy.
2. Find a comfy spot.
   - You can sit on the toilet, stand with one foot on the toilet seat, or squat a little — whatever feels easiest for you.
3. Relax your muscles.
   - Take a deep breath and try to relax your stomach and pelvic muscles. Tensing up can make it a little harder to remove.
4. Find the string.
   - Reach down and gently find the tampon string hanging outside your vagina. If you don't feel it right away, don't panic — just take a moment to relax and try again.
5. Pull it out slowly.
   - Hold the string between your fingers and pull it out gently and steadily at the same angle you put it in. It should slide out easily.
6. Wrap it up.
   - Once it's out, wrap the tampon in toilet paper or the wrapper from your new one.
7. Throw it in the trash — never the toilet.
   - Put it in the garbage (most bathrooms have a small bin). Don't flush tampons — they can clog pipes.
8. Wash your hands again.
   - Finish up by washing your hands. You're done!

💡 **How often should you change your tampon?**

- Change your tampon every **4–8 hours** during the day.
- If your flow is heavier, you might want to change it closer to every **4–6** hours.
- **Never wear a tampon for more than 8 hours,** even overnight — it's best to switch to a pad before bed.
- Changing it regularly keeps you comfortable and helps prevent irritation or infection (including Toxic Shock Syndrome, or TSS, which is rare but important to avoid).

Rhythm Renew

MENSTRUAL CUP

1. Wash your hands.
   - Always start clean.
2. Relax and find a comfy position.
   - Sit on the toilet or squat — whatever feels natural.
3. Gently find the base of the cup.
   - Use your fingers to reach the bottom (not just the stem).
4. Pinch the base to break the seal.
   - This helps the cup slide out smoothly.
5. Pull it out slowly.
   - Keep it upright to avoid spills.
6. Empty, rinse, and reinsert — or store it.
   - Rinse with warm water before putting it back in, or clean and store it if you're done for the day.

💡 **How often should you change your cup?**

- Empty it every **8–12 hours**, depending on your flow.
- You can wear it overnight safely.
- Always wash it well between uses and sterilize it between periods.

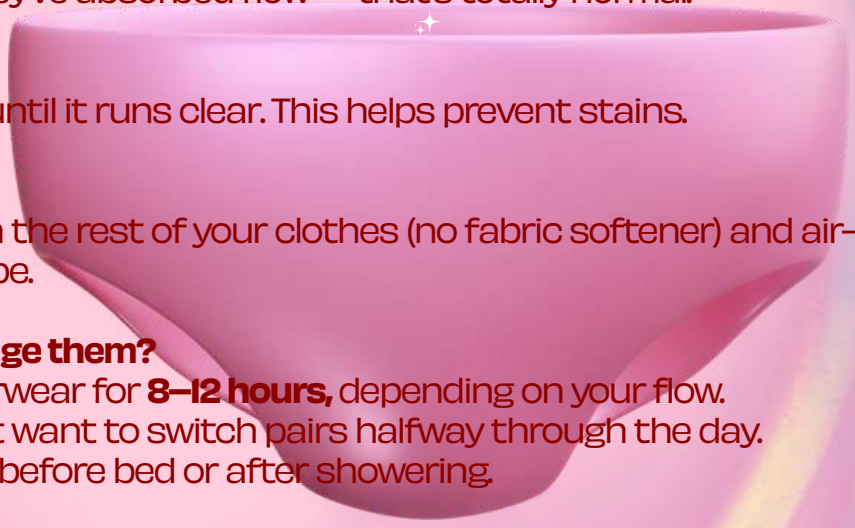

PERIOD UNDERWEAR

HOW TO REMOVE

1. Go to the bathroom and pull them down gently.
   They'll feel a little heavier if they've absorbed flow — that's totally normal.

2. Rinse them out.
   Hold them under cold water until it runs clear. This helps prevent stains.

3. Wash and dry.
   Toss them in the laundry with the rest of your clothes (no fabric softener) and air-dry to keep them in good shape.

💡 **How often should you change them?**

- You can wear period underwear for **8–12 hours,** depending on your flow.
- On heavier days, you might want to switch pairs halfway through the day.
- Always put on a fresh pair before bed or after showering.

PHASE 2: Follicular

Days 7-14

This phase begins right after your period ends. **Your brain tells your ovaries to start getting eggs ready**, and the hormone **estrogen begins to rise.** Estrogen helps your uterus lining grow thick again, preparing for a possible pregnancy one day.

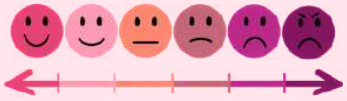

As estrogen climbs, **your energy, mood, and creativity usually go up too**—many people feel more social and ready to try new things.

Hormones:
Estrogen rising

Energy Levels:
Increasing

Mood:
Optimistic and outgoing

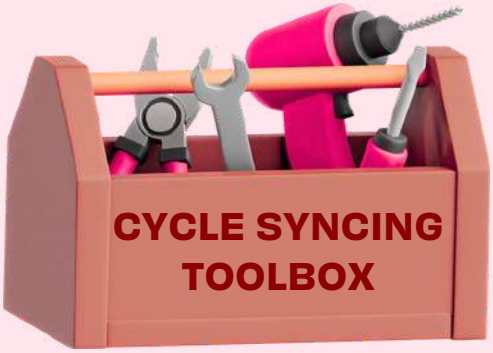

Food Cravings:
Light and fresh foods

Try new cardio workouts

Start new DIY projects

Eat fresh leafy greens

Listen to 285 Hz, 396 Hz, 528 Hz for renewal

PHASE 2: FOLLICULAR

Follow us on Spotify for curated playlists!
@RHYTHMRENEW

MIND

Your energy is starting to rise again. This is a time for curiosity, creativity, and trying new things.

- **285 Hz** → recharge
- **396 Hz** → clear away stress
- **528 Hz** → boost positivity + creativity

Try the "Fresh Starts" meditation:
"I am ready for new beginnings. I'm open to new ideas. I'm excited for what's ahead."
(Continued on next page.)

NUTRITION

Protein and fiber-rich foods like:

- Fruits: bananas, pears, kiwi, and grapes
- Veggies: brussels sprouts, sweet potatoes, and carrots
- Lean proteins (fish) or protein powder
- Whole grains

These give your body energy and support your brain while feeling more social and inspired.

MOVEMENT

It's a great time for energizing movement like:

- Dancing
- Cardio
- Trying new activities like a pick-up game of soccer or rollerblading

Your body is ready to explore and build strength again!

FOLLICULAR MEDITATION

FRESH STARTS

After your period ends, your energy starts to rise again. This phase is about feeling refreshed, curious, and ready to try new things.

Take a deep breath in, like you're filling up with fresh air. Let it out slowly.

"I am ready for new beginnings."

Picture a little seed sprouting into a flower — just like your energy, growing a little more each day.

With every breath, remind yourself:

"I'm open to new ideas. I'm excited for what's ahead."

PHASE 3: Ovulation

Day 14

About halfway through your cycle, a big rise in **luteinizing hormone (LH) tells your ovary to release an egg**—this is called ovulation. The egg moves into your fallopian tube and waits for sperm.

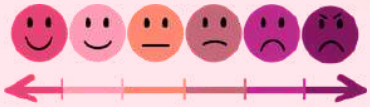

Around this time, **estrogen is at its highest,** and your body may also make a little more testosterone. This combo often makes **people feel their most confident,** outgoing, and full of energy.

Hormones: Estrogen peaks, and testosterone rises

Energy Levels: Highest

Mood: Confident and social

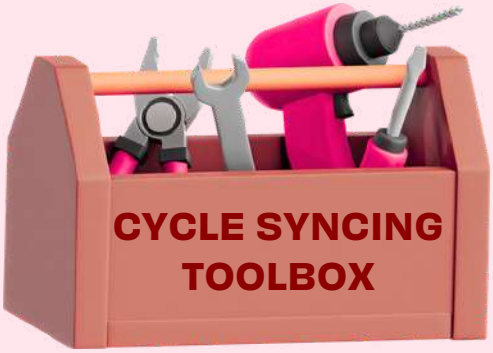

Food Cravings: Nutrient-rich foods

Use your energy for a long walk with the dogs or trampoline sesh!

Take those golden hour selfies

Enjoy a big bowl of berries

528 Hz, 639 Hz, 852 Hz for power

PHASE 3: OVULATION

Follow us on Spotify for curated playlists!
@RHYTHMRENEW

MIND

This is when you feel your most confident, social, and energized.

- **528 Hz** → positivity + vitality
- **639 Hz** → connection + heart-opening
- **852 Hz** → intuition + clarity

Meditation idea:
"I trust my power. I shine with confidence. I connect with others with ease." (More on the next page.)

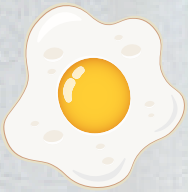

NUTRITION

Eat colorful, nutrient-rich foods like:

- Berries
- Leafy greens
- Salmon
- Eggs
- Nuts

These fuel your energy, balance hormones, and keep your glow strong.

MOVEMENT

It's a perfect time for high-energy workouts! Think:

- Running
- Biking
- Team sports

Use your natural energy boost to challenge yourself in team sports and games (while still listening to your body.)

OVULATION MEDITATION

SHINE BRIGHT

In this phase, your energy is at its highest. You may feel extra confident, social, and ready to connect with others.

Close your eyes and take a big, full breath. Imagine a warm light glowing in your chest. As you breathe out, see that light shining all around you.

Say:

"I am confident. I am glowing."

Imagine yourself like the sun — bright, strong, and impossible to miss.

With each breath, remind yourself:

"I shine just by being me."

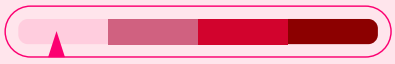

PHASE 4: Luteal

Days 15-28

After ovulation, **your ovary makes progesterone**, which keeps the uterus lining thick. **If the egg isn't fertilized, progesterone and estrogen drop,** signaling your next period.

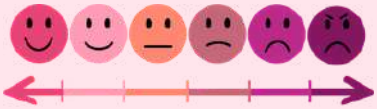

Energy often dips, and this is when PMS can show up—so it's a good time to rest, organize, and care for yourself.

Hormones:
Progesterone rises, then declines

Energy Levels:
Decreasing

Mood:
Can be more irritable or sensitive

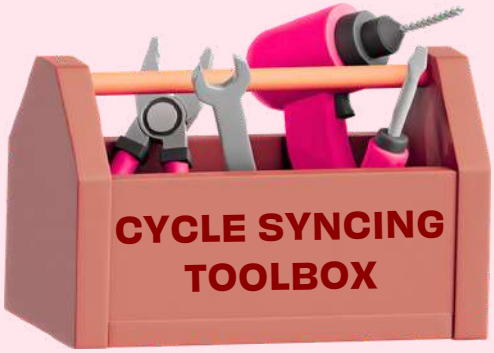

Food Cravings:
Rich and comforting foods

Do light stretching to wake up in the morning

Focus on solo chores or projects

Eat magnesium-rich foods

Listen to 396 Hz, 417 Hz, 639 Hz for balance

PHASE 4: LUTEAL

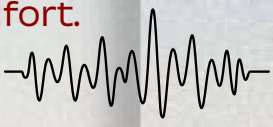

Follow us on Spotify for curated playlists!
@RHYTHMRENEW

MIND

Hormones shift, and moods may feel up and down. This is your body asking for more calm and comfort.

- **396 Hz** → let go of stress
- **417 Hz** → bring balance
- **639 Hz** → feel connected + supported

Meditation idea:
"When I feel restless, I make space for calm. When I feel stressed, I make space for rest." (More on the next page.)

NUTRITION

Magnesium-rich and warm foods like:

- Avocados
- Walnuts
- Turkey
- Dark chocolate
- Teas with ginger or cinnamon.

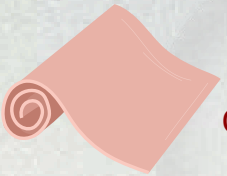

These help with cravings, bloating, and mood swings.

MOVEMENT

Choose calming, steady exercises again like:

- Yoga
- Pilates
- Walks

They help reduce stress and support better sleep while your energy is lower.

LUTEAL MEDITATION

SLOW & STEADY

Before your period, your body wants more rest. You might feel moody, tired, or just want some extra space. This is a time to slow down and take care of yourself.

Breathe in slowly, filling yourself with calm. Let your breath out and relax your shoulders.

Say:

"It's okay to rest. I listen to what my body needs."

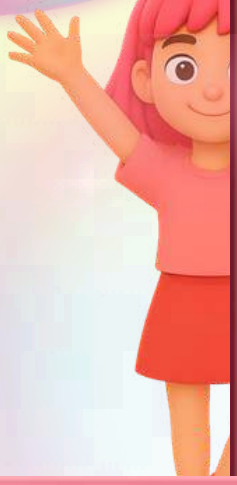

Picture yourself sitting under a big, steady tree — strong roots, safe and supported.

With each breath, remind yourself:

"I am grounded. I can let go of what I don't need."

What's happening there_

BODY CHANGES

UNDERARMS

- Some people start using deodorant or antiperspirant, but it's up to you and your comfort.
- Shaving is a personal choice—there's no right or wrong time to start.
- You'll also notice hair growing under your arms and new body smells (called body odor). This happens because sweat glands become more active.

BREASTS

- Your breasts may start as small "buds" under the nipples and grow at different speeds.
- You may choose to start wearing a training bra, sports bra, or bralette for comfort.
- You might feel tenderness or soreness sometimes—this is part of the growth process.
- It's normal if one grows faster than the other at first.

BODY HAIR

- Showering more often helps you stay fresh, clean, and comfortable as your body changes.
- The new hair may look darker, thicker, or curlier than the soft hair you had as a kid — and that's totally normal.
- Sweat glands get more active, which can make body odor stronger than before.
- Body hair starts to grow under your arms, on your legs, and in your pubic area — it's a normal part of puberty.

Rhythm Renew Tip:

Periods look different for everyone — flow, discharge, symptoms, and timing all vary. Your body develops at its own pace, and that's totally normal.

BRAIN FOOD

Rhythm Renew

SOUND FREQUENCIES

for each cycle

Rhythm Renew Tip:
Click on the underlined Hz number to listen!

MENSTRUAL PHASE

- 174 Hz – Called a "natural pain reliever" sound, can ease cramps.
- 285 Hz – Supports healing and helps you feel more comfortable.

FOLLICULAR PHASE

- 285 Hz – Helps your body recharge and feel fresh.
- 396 Hz – Clears out stress and "blah" feelings so you can start new.

OVULATION PHASE

- 528 Hz – Fills you with energy and positivity when you're at your peak.
- 639 Hz – Heart-opening, great for feeling confident and social.

Follow us on Spotify for curated playlists!
@RHYTHMRENEW

LUTEAL PHASE

- 396 Hz – Great for letting go of stress when moods feel up and down.
- 417 Hz – Calms irritability and helps you feel more balanced.

Rhythm Renew

SYNCING YOUR DIET

Nourish your body with foods that support your hormonal balance during each phase. This will help you manage cravings and boost your energy levels.

MENSTRUAL

Iron-rich foods

FOLLICULAR

Fiber and protein-packed foods

LUTEAL

Magnesium-rich and warm food and spices

OVULATION

Colorful and nutrient-rich foods

Rhythm Renew Tip:
Pay attention to your cravings, but opt for healthier versions of your favorite foods.

Rhythm Renew

Adjust your workouts **to match your energy levels** during each phase. This will help you **avoid burnout** and **feel your best.**

MOVEMENT SYNCED TO YOUR CYCLE

MENSTRUAL

Gentle movement like stretching, walking, or yoga can help ease cramps and support rest.

FOLLICULAR

Try fun, energizing workouts like dancing, biking, or cardio to match your rising energy.

OVULATION

This is your peak energy time! Go for high-intensity workouts, team sports, or harder classes.

LUTEAL

Slow it down with pilates, strength training, or calming yoga to stay grounded before your period.

Rhythm Renew Tip:
Listen to your body and don't push yourself too hard, especially during menstruation and the luteal phase.

HOW TO USE YOUR CYCLE TRACKER

This calendar page is for you—to help keep track of your period and better understand your body each month. Here's how to fill it out:

1. Fill in the month and year at the top.
2. Fill in the dates in the boxes so it matches a regular calendar.
3. Mark the first day of your period (the day you start bleeding). Shade it in or add a symbol (like a 💧).
4. Track the last day of your period too—this helps you see how many days your period lasts.
5. As the month goes on, note what phase you're in (Menstrual, Follicular, Ovulation, or Luteal). You can use different colors or symbols for each.
6. Use the notes section to write down how you feel—energy levels, moods, cravings, or any symptoms like cramps, headaches, or skin changes.

Rhythm Renew Tip:
Over time, you'll start to notice patterns—like when you usually feel most energized, when PMS shows up, or how long your cycle normally is.

SUN	MON	TUES	WED	THUR	FRI	SAT

NOTES:

Ladies,
Share this with your partner too- it's a team effort!

Rhythm Renew

FERTILITY

What Every Women Needs to Know About Fertility

RHYTHMRENEW.COM

WHAT IS FERTILITY?

Fertility is your body's natural ability to conceive. Each month, hormones like estrogen, progesterone, LH, and FSH work together to prepare for ovulation and possible pregnancy. By learning to recognize your body's signals — like cervical mucus changes or temperature shifts — you can better understand your fertile window. Cycle syncing helps you tune into these rhythms and support your hormones, energy, and mindset along the way.

Each phase supports fertility in its own way — syncing with your cycle helps you make the most of your fertile window.

- **Follicular:** Estrogen rises to mature your eggs. Focus on protein, greens, and light movement to boost egg health.
- **Ovulation:** Your fertile window. Prioritize hydration, healthy fats, and intimacy to support conception.
- **Luteal:** Progesterone builds your uterine lining. Choose warming foods and rest to lower stress and support implantation.
- **Menstrual:** Your body resets. Replenish with iron-rich foods, hydration, and rest.

Cycle syncing helps balance hormones and create the healthiest environment for conception.

COMMON SYMPTOMS?

🌡️ **Physical Symptoms:** clear stretchy cervical mucus, slight rise in body temperature after ovulation, mild ovulation cramping or bloating, increased libido, breast tenderness.

💭 **Emotional & Mental Symptoms:** teady energy, balanced mood, and clear skin during the follicular and ovulation phases.

❤️ **Lifestyle Support:** adequate sleep, stress management, hydration, and nutrition all play major roles in supporting fertility.

MIND, BODY, & RHYTHM

Rhythm Renew Tip:
Studies show that playing gentle music can nurture your baby's growing mind.

MIND

Your mind and body work together when you're trying to conceive — a calm, positive mindset supports both fertility and your baby's future well-being.
Sound-based practices like binaural beats, solfeggio frequencies, and sound baths can reduce stress and promote relaxation. Try listening to these tones:

- **396 Hz** → releases fear and tension
- **528 Hz** → supports renewal and healing
- **639 Hz** → restores emotional harmony

Try the "Opening to Possibility" meditation when you need to feel grounded and open to new beginnings.

NUTRITION

Fuel your fertility with foods that balance hormones and support egg quality. Avoid alcohol, excessive caffeine, and processed foods.

- **Protein-rich foods** like eggs, fish, beans, and lentils for hormone production
- **Healthy fats** from avocado, olive oil, and nuts to support ovulation
- **Leafy greens & colorful veggies** for folate, iron, and antioxidants

- **Zinc & B-vitamin foods** (pumpkin seeds, chickpeas, bananas) to boost reproductive health

MOVEMENT

Gentle movement boosts blood flow to the reproductive organs, strengthens the pelvic floor, and reduces stress, all essential for conception.

- **Add pelvic and hip exercises —** Kegels, squats, and bridges to strengthen vaginal muscles and support fertility.
- **Practice fertility – focused yoga** poses like Legs-Up-the-Wall, Goddess, and Bridge Pose to open the hips and increase pelvic blood flow.

- **Use diaphragmatic breathing** or gentle stretching to calm your nervous system and stabilize your core.
- **Rest intentionally —** recovery is just as important as activity.

FERTILITY MEDITATION

OPENING TO POSSIBILITY

Sit or lie somewhere comfortable.
Place one hand on your belly and one on your heart.
Take a deep breath in through your nose and exhale slowly through your mouth.
Let your breath soften your body — your inhale fills you with life, your exhale releases tension and fear.

Close your eyes and take a slow, full breath.
Feel your body expand with each inhale, creating space for new beginnings.
Imagine a soft pink light glowing in your belly — warm, open, and full of potential.

Say: *"I am open to creation. I trust my body's timing."*

Picture yourself surrounded by this gentle light — nurturing, abundant, and ready to receive.

With each breath, **remind yourself:**
"I am safe to hope."
"I am open to what is meant for me."

Rhythm Renew

FERTILITY JOURNAL PROMPTS

Your body is preparing, your rhythm aligning. Tune in to the hope, patience, and trust this season brings.

Rhythm Renew Tip:
Invite your partner into the process — talk openly about shared hopes, self-care, and ways to support each other. Emotional connection strengthens your journey toward conception.

1. Body Awareness

- What signals or patterns is my body showing me this cycle?
- How do I feel during my fertile window — physically, mentally, emotionally?
- What practices help me feel more connected to my body's rhythm each day?

2. Trust & Patience

- How can I practice patience while waiting and trusting my body's timing?
- What fears or expectations about conception am I ready to release?
- How can I replace pressure with compassion for myself?

3. Connection & Intention

- How can I bring more joy and intimacy into this process?
- What helps me feel emotionally aligned with my partner or my goal of parenthood?
- In what ways can I nurture love, not just outcome, through this journey?

4. Mindset & Manifestation

- What beliefs about my body or fertility do I want to strengthen?
- What does "receiving" mean to me — physically, emotionally, spiritually?

MENOPAUSE

What Every Women Needs to Know About Their Anti-Period

RHYTHMRENEW.COM

WHAT IS MENOPAUSE?

Menopause is a natural stage in life when a person's menstrual cycles permanently stop, marking the end of their reproductive years. It usually happens between ages 45 and 55, when the ovaries stop releasing eggs and levels of estrogen and progesterone decrease.

LUTEAL PHASE AND MENOPAUSE

As you transition into menopause, your estrogen and progesterone levels gradually decline and stay low, rather than rising and falling like they do throughout your cycle. That's why many people notice familiar luteal-phase-type symptoms — like mood swings, sleep trouble, and bloating — showing up more often or lasting longer.

Rhythm Renew Tip: Keep your environment cool — keep a portable fan for when hot flashes come on.

COMMON SYMPTOMS?

🌡️ **Physical Symptoms:** hot flashes; night sweats; irregular or missed periods; vaginal dryness; sleep problems; headaches; joint or muscle aches; weight gain around the abdomen; thinning hair; dry skin.

💭 **Emotional & Mental Symptoms:** mood swings; irritability; anxiety; depression; brain fog; fatigue; low energy.

❤️ **Long-Term Health Changes:** decreased bone density (osteoporosis risk); changes in cholesterol and heart health.

MIND

Your hormones are shifting, but your wisdom is deepening. Try listening to these sound frequencies to calm the nervous system and support balance:

- **396 Hz** → releases fear and tension
- **528 Hz** → promotes self-love and renewal
- **639 Hz** → restores emotional harmony

Try the "Embracing Change" meditation when you need grounding or reassurance. *(On the next page.)*

NUTRITION

What you eat can make a real difference in easing hot flashes and supporting hormone balance. Focus on cooling, nutrient-dense foods and stay well-hydrated throughout the day.

Fatty fish • Soy-based foods • Leafy greens • Nuts & seeds • Water-rich fruits & veggies • Protein & calcium-rich foods

LIMIT: spicy foods, alcohol, caffeine, sugary or processed foods, which can trigger hot flashes.

MOVEMENT

Regular movement helps manage common menopause symptoms like sleep problems and irritable mood. Hot flashes can also be reduced in frequency and intensity with consistent movement.

- **Try low-impact workouts** like yoga, Pilates, walking, or swimming
- **Add light strength training** to support bone health and hormone balance
- **Practice deep breathing** or stretching when hot flashes or stress arise.

MENOPAUSE MEDITATION

EMBRACING CHANGE

Sit or lie somewhere comfortable. Close your eyes and let your hands rest on your belly or heart.
Take a deep breath in through your nose and slowly exhale through your mouth.
Feel your body start to settle, your breath becoming your anchor.

Close your eyes and take a slow, steady breath.
Feel your body soften with every inhale and exhale.
Imagine a gentle golden light warming your chest — steady and calm.

Say: *"I trust my body. I am safe in this change."*

Picture yourself surrounded by this golden glow —
strong, wise, and grounded in your power.

With each breath, **remind yourself:**
"I am evolving with grace."
"I am whole, exactly as I am."

Rhythm Renew

MENOPAUSE JOURNAL PROMPTS

Your cycle may shift, but your rhythm continues. Tune in to the wisdom within.

Rhythm Renew Tip:
Try journaling after a walk or gentle stretch — movement helps release thoughts and emotions more easily.

1. Body Awareness

- How is my body communicating with me right now?
- What sensations or patterns have I noticed lately — and what might they be trying to tell me?
- What does rest look and feel like for me in this new phase?

2. Self-Acceptance & Identity

- How can I honor who I've been, while embracing who I'm becoming?
- What parts of my identity feel ready to evolve or soften?
- In what ways has this stage brought me new confidence, wisdom, or freedom?

3. Emotional Grounding

- When I feel overwhelmed or unsteady, what helps me come back to myself?
- What emotions or stories about aging am I ready to release?
- What would it mean for me to feel peaceful in change?

4. Reconnection & Renewal

- What brings me joy, pleasure, or calm lately — even in small ways?
- How can I nurture deeper connection with my body, my community, or nature?

THE TIMELINE

1. Perimenopause (the transition phase)

When: Usually starts between ages 40–50 and lasts several years.
What's happening:

- Hormone levels (especially estrogen and progesterone) start to fluctuate.
- Periods may become irregular — shorter, longer, heavier, or lighter.
- Common symptoms: hot flashes, night sweats, mood changes, fatigue, brain fog, and irregular cycles.
- Think of this as your body gradually shifting gears — not stopping suddenly.

2. Menopause (the official marker)

When: Officially occurs 12 months after your last period.
What's happening:

- The ovaries stop releasing eggs.
- Estrogen and progesterone levels stay low.
- Symptoms may continue but often start to stabilize.
- This marks the end of menstrual cycles — but the beginning of a new hormonal balance.

3. Postmenopause (the new normal)

When: Begins after that one-year mark without a period.
What's happening:

- Hot flashes or other symptoms may ease.
- The body adapts to lower hormone levels.
- Focus shifts to long-term wellness — bone health, heart health, mood, and energy.
- This is a time to nurture your body's wisdom and embrace renewal — not loss.

Rhythm Renew

THE Rhythm RENEW PROMISE

Cycle syncing isn't magic, but it can be a powerful tool for understanding and working with your body. Remember to be patient with yourself and celebrate your progress along the way.

Rhythm Renew Tip: Trust your intuition and listen to your body's signals.
